Asleep Alpacas: Justin Zou (Piggy), Wen Hao Dong (Jal Hordan), Yoonah Chang (Yelena), Liesel Wong (King Hagrid)
SoftDev
P00 -- Move Slowly and Fix Things/Creating a website/
2021-10-27
time spent:

Scenario One: Your team has been contracted to create a collaborative storytelling game/website.

- Users will have to register to use the site.
- Logged-in users can either start a new story or add to an existing story.
- When adding to a story,
  - Users are shown only the latest update to the story, not the whole thing.
  - A user can then add some amount of text to the story.
- Once a user has added to a story, they cannot add to it again.
- When creating a new story,
  - Users get to start with any amount of text and give the story a title.
  - Logged in users will be able to read any story they have contributed to on their homepage (the landing page after login).

Database Organization:
stories:

id (INTEGER)	author_id (INTEGER)	title (TEXT)	full_story (TEXT)	last_update (TEXT)

users:

id (INTEGER)	username (TEXT)	password (TEXT)

contributions:

user_id (INTEGER)	story_id (INTEGER)

Components and Purpose:
- Templates
  - home.html: Displays a list of the logged in user's stories they contributed to
  - login.html: Contains a form with username and password input
  - register.html: Contains a form with username and password input
  - new.html: Contains a form with the story title and starting body
  - discover.html: Displays a list of stories the user hasn't contributed to
  - view.html: Display a full story and its title

- edit.html: Displays the latest update and has a form containing a textarea tag to continue the story
    - layout.html: code for the navigation bar
    - macros.jinja: used to properly display stories
- Flask App
    - "/": Renders home.html
    - "/logout": Pops user_id session if exists and redirects to "/login"
    - "/login": Handles logging in
    - "/register": Handles creating new users
    - "/create": Add new stories
    - "/discover": Lists stories the user hasn't contributed to
    - "/story/<story_id>": Shows the entire story or allows a user to contribute to the story depending on whether or not they've already contributed to the story
- SQLite database
    - Relational database containing tables of stories, users, and contributions (a user and which story they've contributed to)

Linkage: Each of the tabs seen on the homepage will go to their respective page. I.e. New goes to create a story page, discovery goes to discovering page etc. Clicking on a story with the view button from the discovery page will lead to a view page and clicking on the edit page will go to that edit page as well. The User would be able to go back with a navbar like this:

The login and register would change to logout if they are logged in already.
The Register, Login, Edit and Create pages will all have a submit button and be submitted through the enter key.
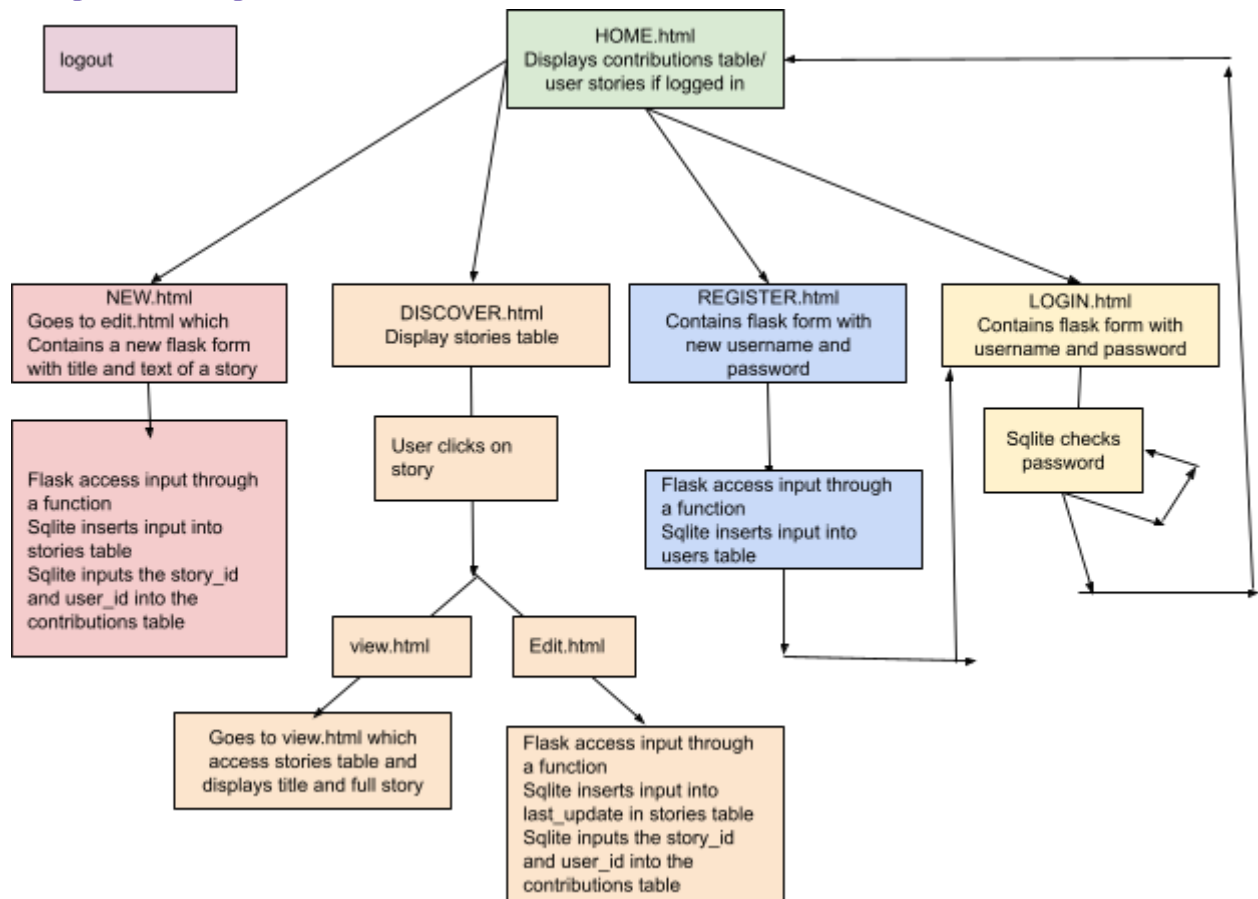

Division of Tasks:
Templates (Front End): Yoonah

SQLite database: Justin

Flask App and Python: Liesel, Wen Hao

Components Map:

logout

HOME.html
Displays contributions table/
user stories if logged in

NEW.html
Goes to edit.html which
Contains a new flask form
with title and text of a story

DISCOVER.html
Display stories table

REGISTER.html
Contains flask form with
new username and
password

LOGIN.html
Contains flask form with
username and password

Flask access input through
a function
Sqlite inserts input into
stories table
Sqlite inputs the story_id
and user_id into the
contributions table

User clicks on
story

Flask access input through
a function
Sqlite inserts input into
users table

Sqlite checks
password

view.html

Edit.html

Goes to view.html which
access stories table and
displays title and full story

Flask access input through
a function
Sqlite inserts input into
last_update in stories table
Sqlite inputs the story_id
and user_id into the
contributions table

The solo Logout Component is to signify that you can logout from any of the pages seen.
